

“Fostering sustainable legume-based farming systems and agri-feed and food chains in the EU” (LEGVALUE)

The goal of LEGVALUE is to pave the road to develop sustainable and competitive legume-based farming systems and agrifeed and food chains in the EU. Using value chains reflecting the market diversity, and farm networks covering the diversity of legumes species, LEGVALUE will demonstrate the added value of various legumes value chains and will provide a range of solutions to improve the economic interest to use legumes. Project will result decision tool for farmers to choose the optimal legume species with their adapted crop management and to assess the economic and environmental benefits of legumes in the cropping systems. Project will contribute to defining the supply chains that are the most competitive to foster legumes crops. LEGVALUE will provide accurate recommendations for the development of legumes in the EU, scientific support for EU and national policy-makers directed at increasing legume production, support technological innovation on increasing self-sufficiency on protein rich plant materials. Project consortium size are 24 participants-institutions from 10 countries. More information at www.legvalue.eu.
