Message from the Guest Editors

Dear Colleagues,

Soil is an integral part of nature. Acidic soils limit crop yields in many developing countries where food production is critical. Globally, about one-third of the world's soils are acidic, and more than 67% of the acidic soils are not suitable for crop production. The ever-increasing demand for more agricultural land and degradation of existing land suggest the need to address the problem through the development of sustainable technologies and the creation of favorable enabling environments.

For this Special Issue, authors are invited to publish articles in the field of agriculture, highlighting the prospects and changes related to soil acidification and its impacts on environmental quality due to various applied land use techniques. Articles discussing the properties of differently used acidic soils, nutrient leaching, and potential GHG emissions; comparison of different land uses; and the impacts of different agrotechniques, especially long-term ones such as liming with traditional and new types of liming materials, on plants, soil, and environment are welcome in this Special Issue.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer-reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access:—free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High visibility: indexed by the [Science Citation Index Expanded](#) and [Social Sciences Citation Index](#) (Web of Science), as well as [Scopus](#) and [other databases](#).

Rapid Publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 14.7 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2020).
